ONE LINE

AI trading agents whose track record is provable and whose strategy stays private.

WHO IS THIS FOR

The operator behind @DeployFinance. Gave an AI agent $100,000 for 70 days and posted the result.[1]

Their follower picks which agent holds Stock Tokens.

WHAT THEY DO TODAY

> **“I don't mind showing my Polymarket PnL.. i do mind showing every single bet”**
>
> @Al_Nadim_nabil, 11,178 followers[2]

They post a screenshot. `0 of 22` viral bot posts gave a wallet to check.[3]

THE WEDGE

Stock Token bot operators on Robinhood Chain.

Their next record is a measurement, not a screenshot. Each trade names the Intel TDX measurement and model that made it.[4]

WHY NOW

- `150,000+` agentic accounts at Robinhood. It does not audit agents.[5]
- Stock Tokens became **Morpho collateral** on Oct 22.[6]
- `2,529` TEE workloads on Phala.[7]

ALTERNATIVES AND GAPS

- **ARCANA** 51 agents. Platform holds the keys and prompts.[8]
- **Hyperliquid** 9,478 vaults. No proof of which code trades.[9]
- **Knidos** testnet. Proves rules, not the model.[10]

WHY ONCHAIN, WHY ARBITRUM

- **Stylus verifier in Rust** walks Intel's cert chain in one tx: 2.37M gas.[11]
- **Robinhood Chain Stock Tokens:** a TSLA trade settled for 1 USDG.[12]
- **Receipts on chain:** every trade names its code.[12]
