AI trading agents with a provable record and a private strategy

On Robinhood Chain | Arbitrum Founder House Singapore

0 of 22 viral AI trading bot posts gave a wallet you could check

0 / 22

viral "my AI trading bot made 200x" posts that gave a wallet address to check. @Meta_ZET vetted all 22.

"Until an agent can prove its track record without human intervention, it's just a cool demo."

@AndresLeo383120, 522 followers, 2026-07-14

Source: gtm/signals.md rows 1 and 14, both re-read through api.fxtwitter.com on 2026-10-24; text verbatim, follower counts as of that read.

Robinhood opened accounts to 150,000+ agents. Nobody can check which code trades.

150,000+
customers with agentic trading accounts

~30M
agent tool uses a day

"Robinhood does not control, supervise, monitor, recommend, or audit agents."

The account answers how much an agent can lose. It does not say which code is trading, or whether that code earned the record.

Copy trading pays for screenshots: "Most copy trading platforms just show a fake leaderboard to get new users." @Uchi_Yeager18

Sources: Robinhood newsroom, HOOD Summit, 2026-09-29 (150,000+ agentic accounts, ~30M tool uses a day, audit statement); gtm/signals.md row 10, fxtwitter 2026-10-24.

Three steps turn a track record into something you can check

1

The creator's agent runs in a TEE

An Intel TDX confidential VM. The agent makes its trading key inside it. The strategy text is sealed config, pinned by hash in the measured compose.

2

Every receipt names the code and the model

TradeExecuted records the TDX measurement and the model hash. Stylus verifiers in Rust check both on chain.

3

Followers admit only that code

The follower's account stores the agent key only for a measurement they approved. A different workload is refused.

Sources: README.md, docs/ENGINEERING.md, contracts/src/AgentAccount.sol. The measurement is Intel TDX's hash of the workload; the account checks it in the transaction that admits the key.

One real trade and one real refusal, both on chain

ATTESTED TRADE

Bought TSLA with 1 USDG

TradeExecuted names the workload measurement 0xeb2d9462… and the model hash 0xc8536dbf…

Status success, 504,449 gas

tx 0x0023f359…3b03, block 127,188,951

REFUSED WORKLOAD

A different workload

A genuine Intel quote from other code: registerAgent reverts MeasurementNotApproved

Status failed, 2,349,054 gas

tx 0xf98156ad…fcc8, block 127,632,496

What you see: open each link on the explorer. The trade's Logs tab shows the measurement and model hash. The refusal shows status failed. The app leaderboard lists each strategy by compose hash, with every boot's measurement beside it.

Sources: cast receipt on chain 46630 (rpc.testnet.chain.robinhood.com), 2026-10-24: trade status 1, gas 504,449; refusal status 0, gas 2,349,054. Explorer: explorer.testnet.chain.robinhood.com.

Private strategy, public proof

Sealed

Strategy hash in the measurement

The measured compose commits to the strategy's hash and the CVM boots only on a match. The strategy text is sealed config. A CVM with the hash pinned is admitted on 46630.

2.37M gas

Intel's cert chain in one transaction

A Stylus verifier in Rust walks the Intel certificate chain on chain, in the transaction that admits the key.

43 of 43

TCB and QE identity checks

The Stylus verifier crate checks Intel's signed TCB Info, QE Identity and revocation lists, and a revoked platform never passes. 45 tests, 43 of 43 guard mutants killed.

Sources: 2,371,819 gas by cast estimate on chain 46630 (docs/ENGINEERING.md); verifier/MUTATIONS.md; strategy commitment: agent/src/strategy.ts, agent-cvm/deployments/2026-10-24.json, registerAgent tx 0x5fdc4acb...965c.

351 tests and 122 killed mutants guard the follower's account

351
forge tests, 25 suites

122 / 123
AgentAccount guard mutants killed

31 / 31
ChironGate guards killed

85
Rust tests across both verifiers

ROLES

Owner (follower): approves a measurement, sets caps, pools and the model pin, pauses, revokes, withdraws. Two-step ownership.

Agent key: calls execute with a receipt. Can never become owner.

Stylus verifiers: admit the key, check the receipt.

GUARDS ENFORCED IN THE SWAP

Per-trade cap, rolling 24-hour cap, owner approval above a threshold

Canonical Uniswap v4 pools only, settled by balance delta

ERC-8056 corporate-action guard; unapprove revokes in the same transaction

forge test -j 1 on the integrated tree: 351 passed, 0 failed, 25 suites (docs/test-logs/forge-test-signet-2026-10-24.log). cargo test --release: verifier 67, receipt-verifier 18. docs/SECURITY.md, docs/security/agent-account-mutations.md.

Five named creators already publish returns and keep the strategy sealed

"If someone shows you a PnL, but not the thinking behind it, where's the credibility?"
@KillaXBT, 239,232 followers, 2025-12-08

"Track records are easy to verify onchain. The hard part is proving the agent didn't just overfit its model to last month's volatility."
@CoderJunkie, 13,373 followers, 2026-10-22

FIRST CREATORS

@DeployFinance 7,295
$100,000 agent wallet, 70 days

@GrowiHF 1,592
vault at +$2.94M all-time PnL, strategy undisclosed

@Arcana_Arena 236
40 creators, 51 agents on Robinhood Chain

@HarmonicAgents 2,502
posts Stock Token pool volume

@senpi_ai 14,741
114 strategy templates

Sources: gtm/USERS.md rows 1, 2, 3, 8, 10 (followers per fxtwitter 2026-10-24; arcana-arena.com block 95,182,673; Hyperliquid vaultDetails 2026-10-24); quotes gtm/signals.md rows 2 and 15.

Creators earn on new profit. Followers pay for the code they approved.

CREATOR PERFORMANCE FEE

A share of profit above the follower's high-water mark, so a creator is paid only for new profit.

FOLLOWER SUBSCRIPTION

A flat monthly fee for an agent whose measurement the follower admitted.

Signet takes a share of each fee. The audience already sits in public-PnL venues: Hyperliquid lists 9,478 vaults and $405,600,393 of TVL, and none can say which code trades.

Source: stats-data.hyperliquid.xyz/Mainnet/vaults, read 2026-10-24 (gtm/COMPETITORS.md section 2). Fee terms are the business model; the account enforces which code may trade.

Others prove the number or the platform. Signet proves the code.

Product	What it proves	What it leaves open
ARCANA	Decisions were not edited after the fact (Merkle roots on chain)	Which code ran. The platform holds keys and prompts
Hyperliquid vaults	PnL and TVL, on chain	Which code or model trades
Robinhood Agents	Limits and approvals on the account	Which agent code is trading
Knidos	ZK proof that trades fit approved exchanges and parameters	Which model decided. Testnet
Phala agents	A workload ran in a TDX VM with a measurement	That it trades, and any account that refuses other code
Signet	**The code and model behind every trade, enforced by the follower's account**	**Prompt and strategy stay in the enclave**

Sources: gtm/COMPETITORS.md (arcana-arena.com docs read 2026-10-24; Hyperliquid stats API; Robinhood newsroom 2026-09-29; knidos.xyz; Phala 2025 report).

Five named creators, one receipt, one message

"Your next record can be a measurement, not a screenshot."

FIRST AUDIENCE

40 creators and 51 agents on ARCANA's Season 2 US Equities board

THREE CHANNELS

Direct DMs with the TSLA receipt attached. Leaderboard hosts add a measurement column. Builder channels at Robinhood Chain, Arbitrum, Phala.

THE INTRO THAT HELPS

Gaetan Thabot, Robinhood Chain partnerships. Ben Greenberg, Arbitrum Foundation DevRel.

Proof first: 30 days of Stock Token trades from an outside creator, one measurement on every event.

Sources: arcana-arena.com, 2026-10-24 01:13Z, block 95,182,673; names and titles per the Open House judge roster; deck/canvas.html GTM canvas.

The ask: introductions now, milestone funding to put five creators on chain

THE ASK

One introduction to Robinhood Chain partnerships

Five creators running agents in a TEE

Funding released 50% upfront, 50% on the milestones

30-DAY MILESTONES

Week 1 First attested trades from the CVM whose compose pins the strategy hash

Week 2 TCB and QE identity checks on the verifier deployed to 46630

Week 3 Mainnet 4663 deployment from the runbook

Week 4 Five creators admitted, first trades naming one measurement each

Team: aarav1656 and pranjalcodesinw3, builders of every layer from the Stylus verifiers to the app.

Check the TSLA trade yourself: tx 0x0023f359...3b03 on the explorer

Sources: github.com/pranjalcodesinw3/chiron commit history; docs/mainnet-runbook.md; milestones follow the Proof You Need First box of the GTM canvas.

Team Name: Signet

One line: What You're Building: trading agents with a provable record and a private strategy

Who is This For

the operator behind @DeployFinance (7,295 followers), who gave an AI agent $100,000 for 70 days and posted the result, and the follower deciding which agent should hold their Stock Tokens

What They Do Today

post a screenshot. "I don't mind showing my Polymarket PnL.. i do mind showing every single bet" (@AI_Nadim_nabil, 11,178 followers). 0 of 22 viral bot posts gave a wallet to check (@Meta_ZET)

Alternatives and Gaps

ARCANA: 51 agents, but the platform holds the keys and prompts. Hyperliquid: 9,478 vaults, no proof of which code trades. Robinhood Agents: 150,000+ accounts, no audit. Knidos: testnet, proves rules, not the model

The Wedge

stock token bot operators on Robinhood Chain. every trade names the Intel TDX measurement and model hash that made it, the follower's account refuses any other workload, and the strategy text is sealed config whose hash the measured compose pins

Why Now

150,000+ agentic accounts at Robinhood, which does not audit agents. Stock Tokens became Morpho collateral on Oct 22 (https://x.com/RobinhoodCrypto/status/2113270580472381515). 2,529 TEE workloads already run on Phala

Why Onchain, Why Arbitrum

a Stylus Rust verifier walks Intel's cert chain in one tx (2.37M gas), so anyone can re-check it. Stock Tokens live on Robinhood Chain: a TSLA trade settled for 1 USDG and its receipt names the code on chain

First 5-10 Users

@Arcana_Arena (40 creators, 51 agents), @HarmonicAgents (2,502), Meridian402 (stock token market maker), @DeployFinance (7,295), @GrowiHF (1,592), @senpi_ai (14,741), @betashop (22,573), @the_nof1 (54,390), @OxSimpleFarmer (28,443), @Agent_Minimum (471). the first five get a dm this weekend with the TSLA receipt

Ship This Weekend

the measured compose pins the strategy's hash and the decision loop runs inside the enclave; that CVM is admitted on Robinhood Chain testnet (tx 0x5fdc4acb...965c). following leaves exactly one measurement approved. demo: the attested TSLA trade and a different workload refused, both read from the chain

Sources: fxtwitter 2026-10-24 (posts, followers); tx 0x0023f359...3b03, chain 46630; Robinhood newsroom 2026-09-29; Morpho collateral post 2026-10-22, https://x.com/RobinhoodCrypto/status/2113270580472381515; Phala 2025 report; arcana-arena.com block 95,182,673; Hyperliquid stats API 2026-10-24; cast estimate 2,371,819 gas.

Team Name: Signet

One line what You're Building: trading agents with a provable record and a private strategy

Who Buys, Who Uses

creators use it: they supply an agent and earn a performance fee on new profit, the business model. followers buy it: they subscribe, fund their own account and approve one measurement

First Reachable Audience

40 creators and 51 agents on ARCANA's Season 2 US Equities board (block 95,182,673), plus operators who post Stock Token volume in public: @HarmonicAgents (2,502), @OxSimpleFarmer (28,443)

Proof You Need First

30 days of Stock Token trades from an outside creator, one measurement on every receipt. today on chain: one attested TSLA trade (block 127,188,951) and one refused workload (block 127,632,496)

3 Distribution Channels

direct dms to stock token operators with the TSLA receipt attached; leaderboard hosts like ARCANA and Senpi adding a measurement column; builder channels at Robinhood Chain, Arbitrum and Phala

Core Message, One Sentence

your next track record can be a measurement, not a screenshot: every trade names the code that made it, and the strategy text stays sealed behind a hash the measurement pins

The Intro That Helps

Gaetan Thabot (@GThabot), Robinhood Chain partnerships, for stock token creators. Ben Greenberg (@hummusonrails), Arbitrum DevRel, for the Stylus verifier. Phala as the TEE partner for creator CVMs

5 Named Targets

@Arcana_Arena (40 creators, 51 agents); @HarmonicAgents (2,502, trades Stock Tokens); Meridian402 (stock token market maker); @DeployFinance (7,295, $100,000 agent for 70 days); @GrowiHF (1,592, $2.94M all-time vault PnL)

The Ask This Weekend

one intro to Robinhood Chain partnerships and one to Arbitrum DevRel, plus five creators willing to run an agent in a TEE. CTA: open tx 0x0023f359…3b03 on the Robinhood Chain explorer and read the measurement and model hash

Sources: arcana-arena.com 2026-10-24 01:13Z, block 95,182,673; @HarmonicAgents post 2026-10-23, followers per fxtwitter 2026-10-24; tx 0x0023f359…3b03 and 0xf98156ad…fcc8, chain 46630; names and titles per the Open House judge roster; @DeployFinance post 2026-10-23; @GrowiHF Hyperliquid vaultDetails 2026-10-24.
